

## FLOOR NIKE-CONVERSE STORES

### PROBLEM

The design office was looking for an industrial floor with a vintage look for the Nike-Converse stores. The floor needs to resist heavy foot traffic and moisture that can be polluted with de-icing salts.

### SOLUTION

The first trials with **CEMTOP 340** were so successful that this became the standard finishing for the floors in all the new stores.

The concrete substrate is primed with **CEMPRIME AC**. Successively min. 8 mm **CEMTOP 340** is poured all over the surface. In order to have the desired vintage look, the hardened floor is polished with a small-mesh wire netting.

A two-component PU coating is used in order to finish the surface

### USED PRODUCTS

[CEMPRIME AC](#) : Universal primer for cementitious screeds.

[CEMTOP 340](#) : Self-smoothing flooring system for commercial and industrial buildings.

### PROJECT DETAILS

<b>LOCATION</b>	Montebauer—Germany
<b>DATE OF EXECUTION</b>	April 2016
<b>ENGINEERING</b>	Yellow Stone Interior Projects
<b>CONTRACTOR</b>	Renobeton
