

NEW FLOOR BMW SHOWROOM INGOLSTADT

PROBLEM

BMW introduces a new flooring system (click system) of ArsRatio in the showrooms of their distributors. For this purpose the existing flooring (in this case glued tiles) should be broken out. Then, the sub-floor is leveled again. A short implementation period is an absolute necessity.

SOLUTION

ArsRatio specifies CEMDURE 200 as sublayer for their tile system. Where necessary pits, trenches, ... first need to be corrected with a mortar (CEMDURE 200 was also used for this operation). In order to close the pores and to ensure a good adhesion to the existing subfloor, it is pre-treated with CEMPRIME AC. Subsequently ± 4 mm CEMDURE 200 is applied over the entire surface (800 sqm). This is done with a "Duo-Mix 2000" pump. The morning after, one can already start with the placement of the new floor tiles.

USED PRODUCTS

[CEMPRIME AC](#): Universal primer for cementitious screeds.

[CEMDURE 200](#): Fast curing self-levelling screed

cemprime
cemdure

PROJECT DETAILS

LOCATION	Ingolstadt—Germany
DATE OF EXECUTION	February 2016
ENGINEERING	BMW AG / ArsRatio GmbH
CONTRACTOR	Diekmann & Klein
